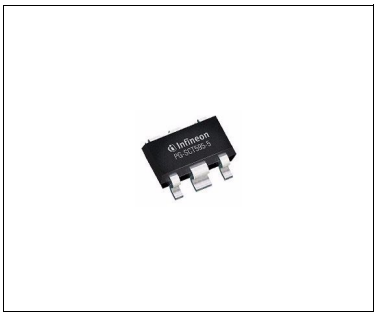
OPTIREG™linear TLE4250-2G

Low drop voltage tracking regulator

AEC Qualified RoHS



Features

- 50 mA output current capability
- Tiny SMD-package PG-SCT595-5 with lowest thermal resistance
- Low output tracking tolerance
- Stable with small ceramic output capacitor
- Low dropout voltage
- Combined reference / enable input
- Low current consumption in stand-by mode
- Maximum input voltage V_I = -42 V to +45 V
- Reverse polarity protection
- Output short circuit proof to ground and supply
- Overtemperature protection
- Temperature range T_j = -40°C to 150°C
- Green Product (RoHS compliant)

Potential applications

General automotive applications.

Product validation

Qualified for automotive applications. Product validation according to AEC-Q100/101.

Description

The OPTIREG™ linear TLE4250-2G is a monolithic integrated low dropout voltage tracker in a tiny SMD package PG-SCT595-5 with excellent thermal resistance. It is designed to supply off-board loads (e.g. sensors) in automotive environments. The IC protects itself in case of overload, overtemperature, reverse polarity as well as output short circuit to battery and ground. Supply voltages up to V_I = 45 V are regulated to a reference voltage applied at the adjust input “ADJ” with high accuracy. The output “Q” is able to drive loads up to 50 mA. In order to reduce the quiescent current to a minimum, the TLE4250-2G can be switched to stand-by mode by setting the adjust/enable input “ADJ/EN” to “low”.

2.2 Pin definitions and functions

Pin	Symbol	Function
1	ADJ/EN	**Adjust / enable.** Connect the reference to this pin. A low signal disables the IC; a high signal switches it on. The reference voltage can be connected directly or by a voltage divider for lower output voltages. For compensating line influences, a capacitor close to the IC pins is recommended.
2	GND	**Ground reference.** Internally connected to Pin 5. Connect to heatsink area.
3	I	**Input.** IC supply. For compensating line influences, a capacitor close to the IC pins is recommended.
4	Q	**Tracker output.** Block to GND with a capacitor close to the IC terminals, respecting capacitance and ESR requirements given in the table “**Functional range**”.
5	GND	**Ground reference.** Internally connected to Pin 2. Connect to heatsink area.

	$V_{ESD,CDM}$	-2	–	2	kV	CDM[3)]	P_3.1.7

1) Not subject to production test, specified by design.
2) ESD susceptibility, Human Body Model “HBM” according to EIA/JESD 22-A114B.
3) ESD susceptibility, Charged Device Model “CDM” according to EIA/JESD22-C101 or ESDA STM5.3.1.

Notes

1. *Stresses above the ones listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.*
2. *Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as “outside” normal operating range. Protection functions are not designed for continuous repetitive operation.*

3.2 Functional range

Table 2 Functional range

Parameter	Symbol	Values			Unit	Note or Test Condition	Number
		Min.	Typ.	Max.			
Input voltage	V_I	4	–	40	V	–	P_3.2.1
Adjust / enable input voltage (Voltage tracking range)	$V_{ADJ/EN}$	2.5	–	36	V	–	P_3.2.2
Junction temperature	T_j	-40	–	150	°C	–	P_3.2.3
Output capacitor requirements	C_Q	1	–	–	µF	– [1]	P_3.2.4
	ESR_{CQ}	–	–	3	Ω	– [2]	P_3.2.5

1) The minimum output capacitance requirement is applicable for a worst case capacitance tolerance of 30%.

2) Relevant ESR value at f = 10 kHz.

Note: Within the functional range the IC operates as described in the circuit description. The electrical characteristics are specified within the conditions given in the related electrical characteristics table.

3.3 Thermal resistance

Junction to soldering point	R_{thJSP}	–	30	–	K/W	Pins 2, 5 fixed to T_A	P_3.3.5

1) Specified R_{thJA} value is according to JESD51-2,-5,-7 at natural convection on FR4 2s2p board; The product (chip+package) was simulated on a 76.2 × 114.3 × 1.5 mm board with 2 inner copper layers (2 × 70 µm Cu, 2 × 35 µm Cu).
Where applicable a thermal via array under the package contacted the first inner copper layer.

2) Package mounted on PCB FR4; 80 × 80 × 1.5 mm; 35 µm Cu, 5 µm Sn; horizontal position; zero airflow.
Not subject to production test; specified by design.

4 Electrical characteristics

4.1 Tracking regulator

The output voltage V_Q is controlled by comparing it to the voltage applied at pin ADJ/EN and driving a PNP pass transistor accordingly. The control loop stability depends on the output capacitor C_Q, the load current, the chip temperature and the poles/zeros introduced by the integrated circuit. To ensure stable operation, the output capacitor's capacitance and its equivalent series resistor ESR requirements given in the table "**Functional range**" have to be maintained. For details see also the typical performance graph "**Output capacitor series resistor ESR_{CQ} vs. output current I_Q**". Also, the output capacitor shall be sized to buffer load transients.

An input capacitor C_I is recommended to buffer line influences. Connect the capacitors close to the IC terminals.

Protection circuitry prevent the IC as well as the application from destruction in case of catastrophic events. These safeguards contain output current limitation, reverse polarity protection as well as thermal shutdown in case of overtemperature.

In order to avoid excessive power dissipation that could never be handled by the pass element and the package, the maximum output current is decreased at high input voltages.
The overtemperature protection circuit prevents the IC from immediate destruction under fault conditions (e. g. output continuously short-circuited) by reducing the output current. A thermal balance below 200°C junction temperature is established. Please note that a junction temperature above 150°C is outside the maximum ratings and reduces the IC lifetime.

The TLE4250-2G allows a negative supply voltage. However, several small currents are flowing into the IC. For details see electrical characteristics table and typical performance graphs. The thermal protection circuit is not operating during reverse polarity condition.

Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).
